Professional Summary

Highly capable and results-driven TypeScript Engineer specializing in building type-safe web applications, scalable APIs, and real-time interactive systems. Adept in the React and Next.js ecosystems, with hands-on expertise leveraging Prisma for robust relational database modeling. Proven experience developing modular architectures, integrating WebSockets for real-time synchronization, and designing offline-first Progressive Web Applications (PWAs). Strongly positioned to support full-stack engineering requirements, dashboard creation, and AI/LLM tooling integrations.

Core Skills

- Programming Languages: TypeScript, JavaScript (ES6+)
- Frontend & Frameworks: Next.js, React, tRPC, T3 Stack, Progressive Web Apps (PWA)
- Databases & State Management: Prisma, Relational Data Modeling, PostgreSQL (Prisma-integrated)
- Real-Time & Architecture: WebSockets (Real-time Sync), Service Workers, Modular System Design
- Developer Tools & Workflows: Git, GitHub, GitHub Actions (CI/CD workflows), Web Deployment, Advanced Excel

Professional Experience

CODTECH

Software Development Intern

- Designed and deployed a mobile-first Progressive Web Application (PWA) utilizing Service Workers for offline support and highly optimized asset caching, increasing application performance and reliability by 30%.
- Engineered scalable relational data models to systematically manage complex product and application data hierarchies.
- Synchronized dynamic user interfaces with secure backend state transitions to provide seamless, real-time interactive experiences.
- Utilized modern version control and GitHub deployment workflows to maintain high-quality code standards and seamless application updates.

Projects

AI Development Workspace

Developer

- Architected a type-safe IDE workspace environment using TypeScript, focusing on strict typing and highly modular software architecture.
- Developed modular tooling workflows designed to accelerate tool integration and optimize AI workspace configurations.
- Achieved a 25% reduction in application runtime errors through robust static analysis and strict TypeScript implementation.

Collaborative Editor

Developer

- Engineered a high-performance, real-time synchronization engine using JavaScript and WebSockets to enable concurrent multi-user editing sessions.
- Designed dynamic state management patterns that guaranteed absolute data integrity and zero state conflict across concurrent user sessions.
- Built low-latency client-server communication channels to mimic real-time dashboard responsiveness.

HI BUN Cafe System

Developer

- Designed and deployed a comprehensive full-stack business automation solution featuring a dynamic digital storefront and automated inventory tracking systems.
- Integrated modern relational data structures to automate internal stock validation, streamlining sales and business operations.

Utility & Tracking Apps

Developer

- Developed responsive utility applications automating fiscal calculations and academic schedules using programmatic data validation techniques.
- Reduced manual entry time and improved calculation accuracy through automated, type-safe data-handling workflows.

Education

Bachelor of Computer Applications (BCA)

Smt. Danamma Channabasavaiah College, Bengaluru North University

- Graduation Year: 2027
- Specialization: Software Development, Computer Applications, and Data Analysis
